TRADING PLATFORMS

No commercial experience yet, but going through the documentation to learn them.

- MT4 and MT5 server components
- Manager and Administrator terminals
- Symbol and group configuration
- Execution settings, swaps, commissions
- Margin call and stop-out
- Netting, hedging, FIFO
- A-book and B-book routing
- Bridges and aggregation engines: PrimeXM, oneZero, Centroid, FXCubic
- FIX protocol and session handling

SYSTEMS AND OPERATIONS

- Windows Server administration
- Linux
- SQL Server
- Networking and connectivity troubleshooting
- Red Hat OpenShift (Kubernetes), containers
- Production monitoring and incident response
- On-call rotation, nights and weekends
- Root cause and post-incident analysis

CODE LANGUAGES

- Java
- PHP
- SQL
- PowerShell

AUTOMATION

- Built a few automations with Jenkins jobs and Unix shell scripts

TOOLS

- Jira, Git, Bitbucket, Cursor

LANGUAGES

- Greek - native
- English - fluent

HOBBIES

- Markets and investing
- Travelling
- Cooking
- Health and nutrition

ABOUT ME

For the past five years I have been a software developer at Amdocs, on order management systems. For a short period, I also worked as an operator, on production support. Now I am teaching myself the MetaTrader server side - symbols and groups, execution settings, where the bridge and the liquidity providers sit, and FIX at session level. I like the operations side more than development, and because of that I am aiming for a trading platform which is close to the stock market.

EXPERIENCE

Software Developer (Mid-Level)

Sept 2021 - Present

Amdocs, Cyprus · Order management systems for some of the largest telecom operators in the world

- A short spell as an operator on production support and the on-call rotation, nights and weekends included. Most of it was working out what had broken, then either fixing it or passing it on with enough detail for the next person to carry on.
- Found and sorted out discrepancies between systems that were meant to hold the same records. Usually that meant going back through the data far enough to see where they stopped matching.
- Configured and monitored services on Windows Server and Red Hat OpenShift across development. A lot of that was chasing down why the same build behaved differently in different environments.
- Took changes into production through a controlled process, tested before and checked after, with the record kept. I built and still maintain the Jenkins jobs, release scripts, and SOAP UI test suites the team uses for it.
- Wrote SQL against production data for investigations and for reports.
- Trained new joiners.

EDUCATION, PROJECTS AND CERTIFICATES

BSc Computer Science and Engineering

Cyprus University of Technology, 2017 - 2021

Ship collision alerts from a live AIS feed

Final year project, Cyprus University of Technology

- Took the live AIS feed, worked out when two vessels were on course to hit each other, and raised an alert if a ship went into a restricted area.

Certified Professional - DevOps Foundation (CP-DOF)

Agile Testing Alliance, 2023

Investing my own money in the stock market

Own account, past four years

- Reading the macro news daily and following how it moves the market.

National Service

Cyprus National Guard, 2015 - 2017
